EDUCATION

Dipolog Medical Center Incorporated

Dipolog City

Bachelor of Science in Information Technology

Expected graduation: August 2027

TECHNICAL SKILLS & INTERESTS

Languages: JavaScript · TypeScript · C# · PHP · SQL · HTML/CSS

Frameworks & Libraries: React (18/19) · Next.js · ASP.NET Core (.NET 8 Web API) · Laravel (11/12) · Node.js · Express.js · Inertia.js · Tailwind

Databases & ORMs: PostgreSQL · Supabase · MySQL · Microsoft SQL Server · Entity Framework Core · Dapper Micro-ORM · Eloquent ORM

Developer Tools & AI: Git · Docker · WebSockets (Socket.io, Laravel Reverb) · AI Automation (Google Gemini API, Ollama/LLaVA) ·

Tesseract.js OCR · Telegram Bot API · Open-Meteo API

Interests: AI Automation · Machine Learning · Software Engineering · Mathematics · Psychology & Behavioral Science · Reading

DEVELOPMENT EXPERIENCE

DormFix (Dormitory Management System) | [Live Demo](#)

Dipolog City, PH

Full-Stack Web Developer

Nov 2025 - Present

- Engineered a decoupled full-stack dormitory platform using **React 19, TypeScript, Express 5, and Microsoft SQL Server**, with parameterized SQL access through the **mssql** connection pool.
- Implemented **ACID transaction workflows** for room assignment and tenant management using explicit SQL transaction scopes with rollback protection against concurrent capacity conflicts.
- Built **Socket.io real-time communication** with isolated tenant-landlord rooms, presence tracking, message recall, and administrative muting controls.
- Developed an automated **OCR/AI verification pipeline** using Tesseract.js and Google Gemini for payment-anomaly detection and maintenance-ticket classification, with Resend and Semaphore notification integrations.

IsdaLog Ecosystem (Catch Logging Logistics) | [Live Demo](#)

Dipolog City, PH

Backend & AI Engineer

Feb 2026 - Present

- Architected a multimodal maritime catch-logging platform using **Node.js, Telegram, Google Gemini Flash, Ollama/LLaVA, Laravel 11/12, and PostgreSQL hosted on Supabase**.
- Developed a Laravel backend for live fish auctions using **pessimistic database locking** (lockForUpdate) to protect concurrent bidding operations.
- Integrated **Supabase Storage via S3-compatible APIs** for centralized catch inspection photos and classification media.
- Implemented automated BFAR compliance and safety-warning workflows using **SQL geospatial tracking, Open-Meteo weather data, and Laravel Reverb WebSockets**.

PharmaLink Pharmacy Management System | [Live Demo](#)

Dipolog City, PH

Full-Stack Web Developer

Nov 2025 - Present

- Engineered a decoupled pharmacy POS platform using **React 19, TypeScript, ASP.NET Core 8 Web API, Dapper, Npgsql, and managed PostgreSQL hosted on Supabase**.
- Implemented atomic POS checkout workflows with explicit **IDbTransaction** boundaries across sales, line items, and inventory deductions to maintain transactional consistency.
- Built custom **JWT + BCrypt authentication and role-based authorization** for Admin and Pharmacist workflows using API guards and client-side route protection.
- Developed inventory analytics and low-stock monitoring using **React lazy loading, Recharts, and Tailwind CSS**, with local filesystem storage for profile assets.

CentraLog (Institutional Asset Tracking System) | [Live Demo](#)

Dipolog City, PH

Full-Stack Web Developer

Jun 2026 - Present

- Engineered a decoupled asset-management platform using **React 19, TypeScript, ASP.NET Core 8 Web API, EF Core 8, and MySQL/MariaDB** with a layered backend architecture.
- Implemented a **Strategy Pattern depreciation engine** supporting Straight-Line and Double-Declining schedules, dynamically adjusting valuation based on recorded maintenance downtime.
- Built resilient **bulk asset-transfer and disposal workflows** using EF Core execution strategies, transactions, and immutable audit logs to maintain consistency across multi-asset operations.
- Developed a .NET BackgroundService maintenance daemon and **five-role JWT/RBAC system**, alongside printable audit sheets and batch QR-code property labeling.
